Before an IBC protocol can be approved, PIs and authorized personnel must be up-to-date with all applicable training.

### Required TRAININGS

The use of virus as vectors for genetic material delivery into cells has become very common among the molecular biology community. As such, it is important for users to understand the origins of these tools and potential safety implications of their use.

This training is intended for individuals assigned on projects involving viral vectors. It consists of different training modules that need to be completed according to the type of vector handled in the lab.

<table>
<thead>

IBC Training Requirements

Required TRAININGS continued

This online training, provided by the Environmental Health and Safety (EHS) Office, is intent to all individuals assigned to projects involving the use of human-derived materials (e.g. established and primary cells, blood, plasma, serum, tissues). It is required both at the time of initial work assignment and at least every 12 months thereafter.

OSHA Bloodborne Pathogens (BBP)

Introduction
Module required for all shippers of packages containing biological substances. This course provides the user with the regulatory background and will provide information on proper classification and identification of materials for shipment. If the only dangerous goods to be shipped is dry ice, this module does not need to be completed.

Biological Substance, Category B
This module is for individuals who have completed the introduction module and already know or have identified the material for shipment as a Biological Substance, Category B.

Infectious Substance (Category A)
This module is for individuals who have completed the Introduction and Category B modules and already know or have identified the material for shipment as a Category A, Infectious Substance.

Dry Ice
Module for shippers of packages containing dry ice.

Go to Training

Shipping
This training is required for all individuals preparing materials for shipment of regulated biological materials and/or dry ice.

Once you log in, select Compliance Training, then Biosafety Compliance Training.
