

Radiation Safety Policy
For
Radiation Workers Volunteering as Research Subjects
(Approved by RSC 5/28/96)

No individual who is a radiation worker under the University of Cincinnati Radiation Control and Safety Program may volunteer as a subject to a human research protocol which involves radiation exposure (e.g., an x-ray, a nuclear medicine procedure, etc.).

For this policy a radiation worker is any individual who is listed as a radiation worker under a radioactive material authorization, any individual who is exposed to radiation from radiation producing devices as part of their job (e.g., in the room when an x-ray is activated) and any individual who is monitored for their radiation exposure (i.e., is issued a film badge).

This policy does not apply to individuals who have been referred to the protocol by their physician.
